Welcome to A Cross-Atlantic Workshop Within Data-Driven Precision Health

Event presented by Linköping University in collaboration with Vinnova and Nordic Innovation House

Welcome to this Cross-Atlantic Data-Driven Precision Health Workshop with the aim of creating opportunities for sparks between the participants finding win-win situations for Cross-Atlantic collaborations within Precision Health.

Register here

The overall aim is to create new Cross-Atlantic Collaborations to solve challenges in data-driven precision health. This workshop will serve as the first step according to the Design Thinking Method. Based on your challenges, we will focus on the Empathize, Define, and Ideate steps.

Before the workshop

In this workshop we will use The Design Thinking Method

Prepare by bringing a challenge to the table that you would like to discuss, and we will jointly ideate on how you could overcome that challenge, ending up in a Cross-Atlantic collaboration project idea.

Workshop

Today, we will deep dive into your challenges and Ideate on how to overcome the challenges by collaboration and co-creation, discussing how new emerging technology and international Cross-Atlantic collaborations could be a part of overcoming these challenges.

Next step

If sparks appear during the workshop, the participants are free to keep in touch taking the collaboration to the next step, creating a collaboration project or a new consortium to rapidly prototype their idea, and apply for funding from Vinnova.

Who are you?

You are most likely a professional within the industry and are interested in how emerging tech can have an impact on precision health.
